

Assignment for BO developer

- Create a CRUD application with edit of table of customers with following fields. - login ID, name, phone
- Allow edit of second table with sub-elements: - invoice number, invoice date, customer name
- A dynamic number of lines for each product with following fields- quantity, unit price, name

Variations 1: the total value of quantity * unit price is shown, well formatted in INR currency
The total value of invoice totaling all lines is shown.

Variations 2: Customer on invoice is selected from drop down of customer table

Provide source code by zipping project including git folder so that

commit history can be seen.

Provide a working instance of the web-application on a page hosted by you.

Attention, no copy-paste of existing project
